MEMORANDUM

TO: Tony Gomillion

FROM: Sheila Fitzgerald, Grants & Special Projects Director

DATE: October 5, 2016

SUBJECT: Urban and Community Forestry Grant Award – Bagdad Mill Site Park Tree Demonstration Project

RECOMMENDATION:

That the board approve grant agreement FDACS # 023923 in the amount of \$16,500 for a tree planting demonstration project at the Bagdad Mill Site Park and authorize \$6,000 from the tree mitigation fund as local match.

BACKGROUND

At the March 24, 2016 meeting, the Board approved submittal of a grant application for a tree planting demonstration project at the Bagdad Mill Site Park and authorized using \$6,000 from the tree mitigation fund as a portion of the grant match requirement. The county partnered with the Florida Forest Service, Long Leaf Alliance, UF/IFAS Extension Santa Rosa County, and the Bagdad Waterfronts Florida Partnership, Inc. to develop the proposed project and grant application which was approved for funding in June. This grant application was the highest scoring application among the 25 submitted state wide.

The project includes planting approximately 150 trees including ten species of trees that are native to the Bagdad area. Funds will also be spent on mulch, fertilizer and associated delivery fees. Trees will be planted utilizing public works personnel and equipment, which will serve to meet a portion of the matching requirement.

NEXT STEPS

Upon execution of the grant agreement, staff will procure quotes for the trees consistent with the county's procurement policy. The trees are expected to be planted in November or December. Staff will work with identified project partners during implementation and post planting to implement the demonstration and education aspects of the project.

In the event any part or parts of the project, including all trees and plants, must be removed and replaced for

any reason, replacements must meet the same grade, size, quality and other requirements as stipulated in the original plans and specifications.

SUBRECIPIENT will at all times maintain a safe work area and be responsible for oversight of litter and debris removal. Keep the grounds free of weeds. Mow or cut grasses to the proper length.

The above referenced responsibilities and functions to be performed by SUBRECIPIENT are subject to periodic inspections by the RECIPIENT. It is the intent of the parties that SUBRECIPIENT will be the owner of the plantings and other installations included in the grant application.

1. Planting

Site Factors: Site factors influence long-term survivability. Check each site for mechanical, irrigation lines, electrical overhead and underground utilities, sidewalks, sign conflicts, traffic visibility, light poles, rights-of-way, all hardscape improvements, site size, water table and specific tree space requirements.

Start with Quality Grade Trees: All planting stock or replacement stock must be Florida Grade #1 or better. Select trees with a quality trunk form, branch arrangement and canopy uniformity.

Tree Shipping, Handling and on-site Storage: Trees should be protected during shipping by a tarp or shipped in an enclosed truck. Trees should never be lifted by the trunk. Lift using root ball straps or container handles. On the jobsite, store trees upright, in the shade, and irrigate twice daily with 5 gallons per caliper inch applied to the root ball until planting. Inspect root system quality. Check for kinked and/or circling roots. Do not store trees on asphalt.

Tree Preparation: All synthetic or non-biodegradable material such as nylon rope, synthetic wrap, treated burlap; black weed cloth liner, plastic wrap, string, strapping etc., must be removed from the root ball before planting. Remove all biodegradable material from the upper 1/3 of the root ball.

Cut or shave circling roots before planting. Prune roots that circle or dive into soil. These roots could cause stability and health problems later.

Take precautions to separate materials extending above the soil surface where they can act as a wick and dry the surrounding soil.

If trees are planted with wire baskets around the root ball, the top two tiers of wire should be cut and removed after the root ball is set in the planting hole.

Planting Hole Preparation: The planting hole should be at least three times the diameter of the root ball (where possible). Tree pit depth should be at or slightly less than the depth as the root ball. Place planting ball on existing soil so the tree will not settle. In no case should the trunk flair or first root emerging from the trunk be below the soil level.

Remove large rocks from the hole. Place the tree or palm in the center of the planting tree pit. Position the top of the root ball at or slightly above the surrounding soil surface.

Check to ensure the tree is positioned straight in the hole. Backfill with non-contaminated existing soil. When the hole is half full, slowly water and work the saturated soil.

Place no soil over the root ball at planting. Use of large amounts of organic matter in the backfill is not recommended. Secure the soil around the roots, and provide nourishment, water immediately after planting with 5 gallons of water per caliper inch. Rake the soil evenly around the entire planting area.

2. Finishing Planting

Mulch: Mulch an area at least two feet or three times the diameter of the root ball to a depth of 2-4" with wood chips, bark mulch, shredded mulch, leaves or pine needles. Keep the mulch several inches away from the tree or palm trunk. Do not pile mulch directly against the tree trunk. Replenish mulch as it decomposes maintaining a 2-4" layer over the life of the project.

Staking: Stake only if necessary; for example, if the tree or palm will not stand on its own due to potential vandalism or strong winds. For palm staking and bracing: Wrap 5 layers of burlap under wood battens connected with steel bands. Adjust wood brace length to fit palm pounded into the ground then, toenail to the battens.

Use commercially available elastic materials for strapping or ties equally placed around the tree that allows for movement and increases in tree diameter. Biodegradable material is recommended. Do not use wire even if the wire is inside rubber hosing. Stakes and ties should remain on the trees no longer than one year to avoid girdling.

Pruning: At the time of planting, remove only dead, diseased, damaged, rubbing, cross braches or fronds. After planting, remove sucker sprouts observed around the base of the tree.

Begin corrective/structural pruning approximately one year after planting. When pruning, do not remove more than 1/3 of the live crown during any one growing season.

Watering: Start a regular watering schedule and follow it. Slow deep watering is recommended. Additional water will be needed during hot or dry periods. Promote tree root growth and stability by watering outward away from the trunk to the surrounding soil area. As the tree or palm establishes itself and grows, watering adjacent soil encourages root spread.

Different species of trees or palms and/or soil types need various degrees of watering. Monitor soil moisture, evaluate tree health and adjust irrigation schedules as needed. Non-irrigated sites need to be watched more closely.

Fertilizing: Begin a fertilization program in the first year of planting. Broadcast fertilizing or fertilizer plugs or stakes are recommended. Fertilize lightly after the first year. Administer a balanced fertilizer. Fertilizer application rates should be based on the size of the tree or palm and their specific nutrient requirements. If micronutrient deficiencies are suspected, conduct a soil test, assess the results and revise the fertilization scheme.

This AGREEMENT may be amended at any time provided that such amendments make specific reference to this AGREEMENT and are executed in writing and signed by a duly authorized representative of each party.

In the event that two or more documents combine to form this AGREEMENT, and in the event that there is any contradictory or conflicting clause or requirement in these documents, the provisions of the document(s) prepared by the RECIPIENT shall be controlling.

This AGREEMENT shall be controlled by Florida law, contrary or conflict of law provisions notwithstanding.

In the event that any clause or requirement of this AGREEMENT is contradictory to, or conflicts with the requirements of Florida law, the clause or requirement shall be without force and effect and the requirements of the Florida Statutes and rules promulgated thereunder on the same subject shall substitute for that clause or requirement and be binding on all parties hereto.

Describe the local community and current urban forestry program and role of applicant in that program, if a non-profit group. The Bagdad Mill Site Park is found within the Village of Bagdad, Santa Rosa County, at the confluence of Blackwater River and Pond Creek. The Village itself is as Nationally Registered Historic District and the Bagdad Mill Site Park is also a significant historical site, the previous home of a large southern pine lumber mill. The Park is owned by the state of Florida but is leased to Santa Rosa County for development as a Passive Park. Implementation of a community forestry program emphasizing native trees and those that have a higher level of resistance to wind was identified in the Village of Bagdad Community Vision Plan completed in 2006. The county does not currently have an active urban forestry program but is interested in creating one.

Previous U&CF Grants received by the applicant. When were they implemented, and what did they accomplish? None received by Santa Rosa County.

Describe the goals and objectives of the project: The project includes planting and establishment of 151 native trees with a higher resistance to wind on the Bagdad Mill Site Park. All trees will be "Florida Grade A or better." Environmental and Educational benefits are detailed below. A long term goal is for this project to serve as a catalyst for future programs and partnerships that educate the public and inspire active involvement by the community.

Describe how this project will help to develop and improve this program in the long-term. As the focus of the tree planting demonstration project is on Florida native trees, the public visiting the site will be educated long term about native tree selections for use on wet and dry soils. In addition, the public will learn about native trees that have been shown to perform the best under high wind conditions through research conducted by the University of Florida, including high winds experienced during tropical events. Urban tree canopies are very important in protecting water quality, and demonstration areas help to showcase best tree selections for the public with a goal of increasing urban forest tree cover.

Describe why these funds are needed to complete the project. Santa Rosa County and local organizations have raised funds to complete numerous aspects of opening the Bagdad Mill Site Park including site remediation, site preparation, and various park amenities. Community organizations have contributed a large amount of volunteer time in addition to raising funds for the park. However, even with the funding secured through Santa Rosa County and through other organizations and grants, enough funding has not been secured to complete the much needed tree planting project in the park. These funds, along with match contributed by Santa Rosa County and other organizations, will allow the project to occur.

For a tree planting, describe what species are being planted and why. How will they be installed and maintained (be brief and concise, but complete)? Only native trees were selected for planting and only those found on a recommendation list from a University of Florida IFAS Extension Publication, Selecting Southeastern Coastal Plain Tree Species for Wind Resistance. The majority of the trees selected are those found in the highest and medium-high wind resistance categories. Only the red maple, loblolly pine, slash pine, and longleaf pine, are not found in these highest of wind resistance categories, although still in a medium category. The pines, though, are tied to the history of the site as a southern pine lumber mill, and thus are an important part of the cultural interpretation associated with the site and area. Tree plantings will be conducted following the proper urban forestry science and guidelines, including selection of appropriate native trees for Northwest Florida, wind resistance research data, and planting the right tree in the right place techniques. A plan for 60 day grown in period has been developed.

2016 National Urban and Community Forestry Grant Program

Bagdad Mill Site Park – Native Tree Planting and Demonstration Area

Project Narrative

What environmental or educational value will the community derive from this project? The major community value from the project is establishment of a native tree canopy in a park developed by Santa Rosa County. The local community identified the need for more native trees in the area through input in the Bagdad Village Transportation and Open Space Master Plan completed in June of 2010. The plantings will serve as a demonstration area to the public educating them about correct urban forestry principles for selection and planting of trees. In addition, education regarding “right tree, right place” as well as maintenance of trees will be provided to the public. In addition, the public will learn about native tree species and wind resistance, both important elements of developing a sustainable urban forest tree canopy.

What steps have been taken to carry out this project in a cost effectiveness manner? To allow the highest gain of urban forest tree canopy, Santa Rosa County, along with community organizations, will be providing all of the tree planting resources, both people and equipment. In addition, volunteers have committed to providing watering assistance to ensure proper establishment and survival of the trees. This scenario allows for maximum leverage of grant funds so the most native trees can be planted. Competitive quotes will be obtained for the purchase of trees to ensure the best value. A quote used for budget purposes is provided as an attachment.

How will this project increase citizen involvement and support for the Community’s Urban Forestry program in the long term? What evidence of community support for this project can be produced? Community support is evidenced by several existing community planning documents that highlight both the need and support for native trees. In addition, several organizations are interested in supporting and promoting the project and have committed assistance with the tree planting and establishment program, and further with the public education effort associated with the native tree demonstration area. Many opportunities for citizen involvement will be created from educational opportunities.

How will this project be publicized in the local community? The project will be publicized through Santa Rosa County on their website, social media and press releases. In addition, community organizations providing support to the project will also publicize the project through their meetings and interactions with the general public.

Tree City or Tree Campus USA certification and growth award, last year current? None.

Will a Certified Arborist(s) or a graduate forester from an accredited four year Bachelor of Science in Forestry program oversee this project? If not, who will provide oversight and what are their credentials? Oversight of the project will be conducted by Vernon Compton as Project Director with The Longleaf Alliance. Vernon is a graduate forester with a Bachelor of Science in Forest Management from LSU. He has worked closely with other urban forest experts and often speaks to groups and organizations about the need for urban trees, tree selection, and care and maintenance.

What new partnerships will the project create or encourage? Please refer to attached letters of support detailing new partnerships created. The expertise of these organizations will improve the success of the project including the selection of native trees and grasses. Tied together with the trees, the park will become an excellent classroom for both the general public and for local schools.
